

A Patented device to foster dramatic healthy prolonged life to all creatures by providing non-directional free electron

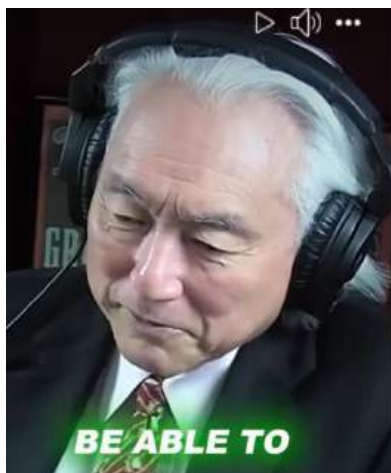

Brief summary of patent:

A simple idea to emit negatively charged free electrons to cells semi-permanently without recharge. Free electron contributes to maintain cells in alkaline leads to healthy longevity by protecting telomere, mitochondria from oxidization.

I created from 0 to 1, then I am looking for to license or assign to whom make it 1 to100.

It is said that new discoveries in physics have a tremendous impact, and this is to promote healthy life in all living creatures.

This is also the simplest application of quantum physics to quantum medicine.

Engine of the cell is mitochondria by Dr. Michio Kaku

1. Technical field

The present disclosure relates to a very effective therapeutic device, application of fundamental principles of biology to quantum medicine in a wearable apparatus format containing a sequence of magnetic components held together in a repelling configuration.

2. Change in magnetic force observed in repelling magnets.

It is commonly known that magnets placed in a repelling position will create a demagnetization effect resulting in a significant reduction of magnetic strength caused by the collision of electrons of the opposite flow of magnetic fields. The collision of repelling magnetic fields dislodges most of the electrons from their magnetic fields, turning them into free electrons donor to human body.

Magnet specialists say theoretically, if there are no other stresses placed on the magnets such as heat, strike, rust to alter its internal molecular structure those magnetic fields will not go down below 50% even after 100 years of use.

3. Explanation of the roles of electrons in cells.

Protect telomere

First of all, keep telomere healthy condition from getting oxidization providing constant free electron in cells. Also, The mitochondria consume oxygen in the body and breathe aerobically in the TCA (The tricarboxylic acid cycle) circuit and the ETC (electron transfer chain). Positively charged ion hydrogen and negatively charged ion electrons are separated, then large amount of positively charged ion hydrogen passed through ATP (Adenosine triphosphate) synthase in mitochondria then produces large amount of ATP energy currency which produces 90% of our body heat. However, electrons leakage combined with oxygen in TCA (tricarboxylic acid cycle) and in ETC (electron transfer chain) produce harmful reactive oxygen species called Reactive Oxygen Species (ROS). Types of ROS are such as Superoxide Radical (O_2^-), Singlet Oxygen (1O_2) ..., Hydrogen Peroxide (H_2O_2) ..., Hydroxyl Radical ($OH^\bullet$) ..., etc.

ROS damages DNA by breaking its strand and oxidation that, if unrepaired, induces apoptosis or oncosis. Protein oxidation and nitration damage antioxidant enzymes, surfactant proteins, and anti-inflammatory pathways that can further propagate maladaptive inflammation.

The above said is to point out the source of many diseases such as aging, cancer, diabetes, allergies, autoimmune diseases, Alzheimer, Parkinson and etc.

Said electron donor alters the positive ion hydrogen by the negative electron in a cell and changes those into harmless water and the acidified cell toward a normal alkaline cell.

4. Displays acidity and alkalinity in mV units.

Magnets have negatively charged electron flows from one pole to the other pole. Positioning two same sized magnets joined together in a repelling position turns them into a negatively charged free electron donor by placing it near the human body.

Let's put pH level and electron relationship in millivolts (mV) to understand pH in the mV standard.

pH 0 = +400mV: Strongest Acid.

pH 7 = 0 mV: neutral Water.

pH 14 = -400mV: Strongest Alkaline.

pH describes cells run normally in weak alkalinity 7.35 to 7.45 pH, which is converted to between -20mV to -25 mV, and makes a new cell, takes - 50 mV along with all the other nutrients.

On the other hand, cancer cells are +30 mV inclined to acidity.

When the acidity cells in our body with + sign in mV scale become electron stealers, this increases fungus and bacteria rampages its destruction.

We are constantly wearing ourselves out so our bodies must make new cells to replace the old cells. Chronic disease occurs when the body loses its ability to make new cells. Traditionally those diseases treated in the wrong paradigm find no cure, instead this newly invented electron donor formation launches a new paradigm to heal cells by physics instead of taking the medical pill paradigm.

5. I'll briefly touch on the relationship between electrons and mitochondria.

Human DNA and chimpanzee DNA are 96% the same; so is the human and cat relationship at 90%, and even fruit such as a Banana is 60% the same as a human.

And both animal and plant cells all have a nucleus, cell membrane, and mitochondria. The mitochondria have a process called the electron transport chain to create an (ATP) (the principal molecule for storing and transferring energy in cells). This main energy source produces 90% of the human body heat.

These cells prefer a slightly alkaline environment, however, once this chain begins to malfunction, positive charged hydrogen begins to accumulate, and those said cells are oxidized into an unhealthy stage.

Above said process causes chronic inflammation of cells which contribute to rapid aging, cancer, and increase rapid bacteria activity. Also, it is known many chronic diseases are caused by mitochondrial dysfunction. However, once electrons are supplied there, it makes acidity cells shift toward alkaline through a complex process and begins to ease these chronic events.

Once damaged cells shift to this stage, a switch called apoptosis in mitochondria kicks in to make damaged cells kill themselves along with cancer cells together.

To establish the evidence above, I asked ChatGPT to prove my hypothesis above, and pasted the results below.

[Q] Can too much hydrogen accumulated in mitochondria due to electron transport chain dysfunction induce cell acidity due to the positivity of hydrogen ions? Could this cause cancer?

[A] One answer stated reads. Hydrogen ions (H^+) accumulate within cells, resulting in cells becoming more acidic. It is called and I quote; Intracellular acidification, and I quote; acid poisoning, and I quote; May be associated with cancer cell progression and resistance.

[Q] Additional questions to ChatGPT; When negative ion electrons are supplied to this intracellularly acidified cell does it alter cells toward an alkalinity?

[A] One of many answers is, Redox reaction with electron supply: Through redox reactions, acidic conditions may be converted to neutral or alkaline states. For example, typical intracellular redox reactions include: One example is the conversion of NADH (reduced nicotinamide adenine dinucleotide) to NAD^+ .

Being documented above by ChatGPT, my hypothesis seems correct and proves my invention works. Based on the results of my application of repulsive magnets to the human body, a newer hypothesis has emerged. This is because the supplied negative iron electrons go through a myriad of complicated processes. It must be contributing to both autophagy and apoptosis because I observed multiple instances of recovery from fatigue and cell regeneration, and this contributes to preventing aging.

I have to ask experts to prove the above said in their further research.

6. Effectiveness verification.

As a result of making various product samples since mid of 2018 and having them tested by acquaintances and my family, unlike oral chemistry medicine, it has been reported the effect is felt immediately after wearing my product, by reducing pain, promoting a quick recovery, improving osteoporosis and down syndrome. I can't disclose names, but in Nov. 2018, I provided my product sample to test on my best friend who had been recovering from a cancer operation. He reported to me it works great and told me to make more samples and supply same to one of our elders, the head of well-known family who has trouble swallowing food, trouble sleeping due to the pain as his feet are swollen due to cancer. After we applied my samples, those with these symptoms reported the

symptoms gradually disappeared and reported that it reduced the cancer cells by 25% on the PET scan. He is still alive, in good health, and his whole family is using my product as one of the very essential items for every single day's activities and even bring along while traveling.

Another big discovery is that my wife has varicose veins on her right leg that haven't had surgery yet. I wanted to rub it but couldn't due to pain, but now probably using citrulline and Magne-chan synergistic effect, it almost disappears and she can sleep while using massages calves machine

7. The repelling magnets unit can generate free electrons semi-permanently without recharging.

Therefore, it will contribute to a wide variety of fields for many decades in a field of human health, pets, plants, and more yet to be discovered.

The following are sample applications.

For instance, applications to human health management, I hear remarkable reports from a doctor used for herself, her families and other associates such as speedy recovery after surgery, with only mild side effects from chemotherapy.

Utilization applied to dairy cows, pigs, chickens, etc. It is especially suitable for managing the health of racehorses. I found cats always seek the repelling magnetic mat.

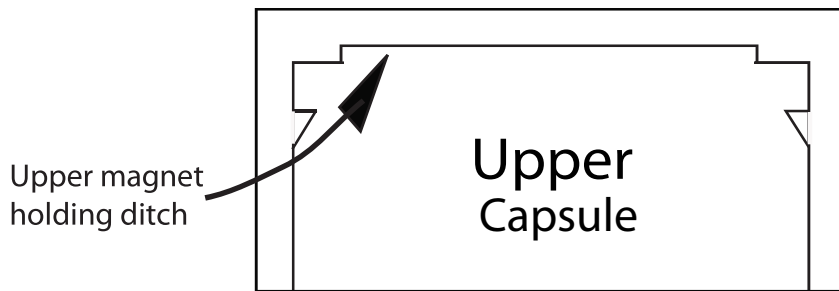

In the field of Agriculture, gardening, especially for natural cultivation with no fertilizer, by supplying alkaline water or to change soil to alkaline by use of repelling magnets to produce abundant fields of rice and other grains.

through a belt to wear

Weight Loss Test by EMP

Left side / 2 magnets are pushed together by rubber band
in repelling position facing the same poles
Weight scale 732

Right side / Rubber band removed and 2 magnets are placed
in non repelling position.
Weight scale 747

Weight loss $747 - 732 = 15$

Chat GPT says because upward repelling power is stronger
than pushing down power causes weight loss.

My intuition is : if two opposing forces are balanced, they typically cancel each other out,
giving a net force of zero. Thus it must be related to the crush by oposit flow of magnetic fields
made out of electron and then non directional free electron is escaping
from magnetic field.

SAMPLES

Magnet used: Rare Earth Permanent Neodymium
Two N35 20mm x 2mm super magnets are super glued in opposite directions
Magnet

Magnet cover: Plasti Dip is used to cover the magnets in order to prevent rusting

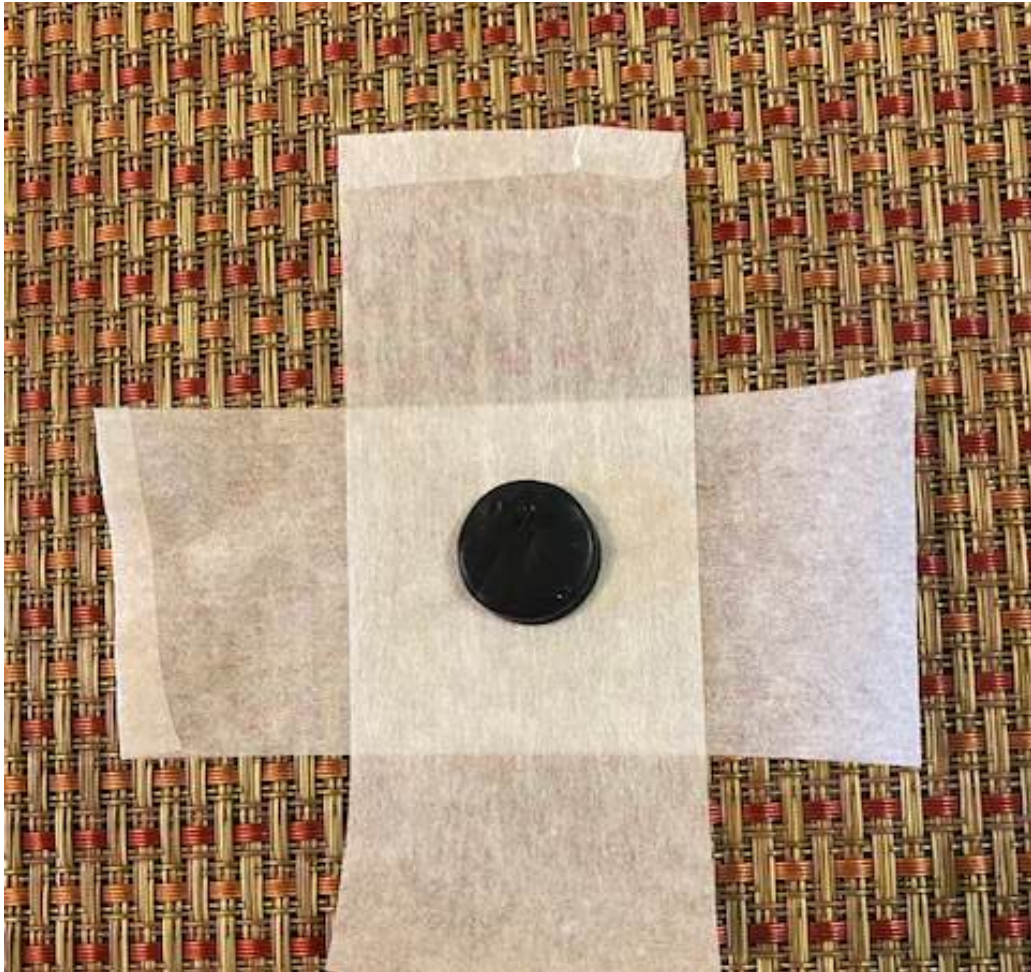

Left: Original magnets

Middle: Glued magnets in repelling position, since demagnetized, only its edge has magnetic power to stick each other this way. This sticking formation is the proof of two magnets are glued in repelling formation.

Right: Magnets covered in Plasti dip to prevent rusting

Hospital use after operation

One sample of the application
as bandaid to large damaged area
for quick cure.

Tap water

tap water test with repelling magnets on right cup

- Cup on the right is with Repelling magnets affected the quality of the water after a few minutes to become clearer better taste.
- This test shows how negatively charged free electrons changed water towards alkalinity lightly with better taste.

Left image is open position of 2 pieces magnets placed in repelling position forms as a housing to water pipe with hinges once put 2 pieces put together.

Right image is showing above said is placed in kitchen tap water filter pipe for use providing free electrons to tap water.

Homemade samples

round cotton + repelling magnets + bandaid combination heals wound faster preventing infection.

Bed mats used to heal the body while sleeping. Can be placed under the sheet, directly on the body and/or in sleeping pillow for the effective use.

I had hip replacement, so this type of application ease my hip joint pain
